pg_foundation

Programming basics for using PostgreSQL

This project provides tools for various aspects of PostgreSQL. Python types for standard PostgreSQL types, a quoted section safe string splitter, exceptions hierarchy, IRI parser, standard optparse options, and more.

Table of contents

Version	Download	Documentation	Description
1.0	[Source.tgz](#)	[HTML](#)	Latest Stable

1. Features

- Exception hierarchy
- PostgreSQL type implementations
- pq IRI parser
- Standard PostgreSQL optparse options
- .pgpass parser
- Version parser
- pg_config information extractor
- bytea codec
- pg_service.conf parser

2. SCM

```
cvs -d :pserver:anonymous:@cvs.pgfoundry.org:/cvsroot/python
co lo
```
