pg_boss

Backend control & configuration management

This project creates Python interfaces to the pg_ctl and initdb processes. It also defines functions for altering the PostgreSQL configuration file in a non-destructive and a non-repetitive manner(ie *not* `echo setting=value >>postgresql.conf`).

Table of contents

Version	Download	Documentation	Description
1.0dev	Source.tgz	HTML	Latest

1. Features

- Non-destructive, non-repetitive configuration management
- pg_ctl interface
- initdb interface
- postgresql.conf configuration management
- pg_hba.conf configuration management
- pg_hba console script for modifying an hba file
- pg_dotconf console script for modifying a configuration file

2. SCM

```
cvs -d :pserver:anonymous:@cvs.pgfoundry.org:/cvsroot/python
co ctl
```
